From: Emily Miller-McGlone
Subject: Personal Reflection

The most important lesson I learned was taking the time to thoroughly discuss, outline, and understand design requirements. Coming from a system analysis and design background, I had always been the one to form requirements and tell our team's developers what they needed to do. In this class, I got to see the process from the developer's side. It made me more appreciative of my past experiences and made me recognize the worth of my work. Because of the rigorous analytical thinking required in each week's design tasks, I have become more aware of and confident in my communication abilities.
